LifeOS

LifeOS — UI & Screen Flows · November 2026

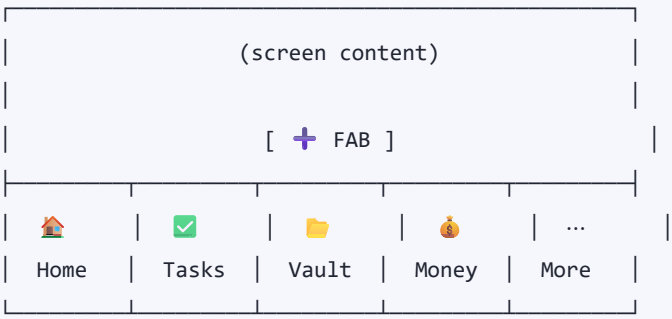

LifeOS — UI / Screen Flow Document

Version: 1.0 · **Date:** 2026-11-08 **Companion to:** `lifeos-features-spec.md` **Design language:** Material 3 (Flutter), light/dark themes, large touch targets, minimal chrome. Urdu + English, RTL-ready.

---

1. Navigation Map (Global)

1.1 Primary Navigation — Bottom Bar (5 tabs)

- **FAB (center-docked, expandable):** tap → radial menu: ➕ Task · 📸 Scan · 🎤 Voice · 💸 Expense
- **More tab:** Health, People, Work/Study, Soul, ATC Rules, Settings — P1 domains live here until used often (then user can pin one to replace Money in the bar — customizable bottom bar, P1)

1.2 Full Screen Inventory

```
App Launch
├── 0.1 Splash / App Lock (biometric)
├── 0.2 Onboarding (first run only, 4 steps)
│
├── 1. HOME (dashboard)
│   ├── 1.1 Life Score Detail
│   └── 1.2 Needs Attention (full list)
│
├── 2. TASKS
│   ├── 2.1 Today (default)
│   ├── 2.2 Upcoming
│   ├── 2.3 Task Detail / Edit
│   ├── 2.4 New Task (sheet)
│   └── 2.5 Overload Shield dialog
│
├── 3. VAULT
│   ├── 3.1 Vault Home (folders + people)
│   ├── 3.2 Folder / Person view
│   ├── 3.3 Document Viewer

│   ├── 4.1 Month Overview
│   ├── 4.2 Monthly Forecast
│   ├── 4.3 Expense list / detail
│   └── 4.4 Add Expense (sheet)
│
├── 5. MORE
│   ├── 5.1 ATC Rules manager
│   ├── 5.2 Health (P1) · 5.3 People (P1) · 5.4 Work/Study (P1) · 5.5 Soul (P1)
│   ├── 5.6 Settings (lock, backup, language, notifications, export)
│   └── 5.7 Premium / upgrade
│
└── Modals (reachable anywhere)
    ├── M1 ATC proposal dialog ("Create this monthly task?")
    ├── M2 Payment completion chain sheet
    ├── M3 Voice capture overlay
    └── M4 Quick scan (from FAB)
```

Depth rule: nothing lives more than **2 taps** from the bottom bar. Core loop actions (scan, add task, mark paid) are **1 tap** from anywhere via FAB or notification actions.

---

2. Screen-by-Screen Specification

0.2 Onboarding (4 steps, skippable after step 1)

Step 1 — Role picker - Full-screen, warm illustration, headline: *"Run your whole life from one app"* - 5 large cards: Student / Professional / Parent / Business owner / Just me - Selection tunes copy and default ATC suggestions throughout; no account asked

Step 2 — First scan (the aha moment) - *"Scan any document — a bill, your ID, anything"* → opens camera with ghost-frame overlay - After scan: show the magic — auto-crop animation → detected type chip ("Looks like an electricity bill") → extracted amount/due date appear as filled fields - Skip link bottom-left (small, available but not emphasized)

Step 3 — Monthly payments quick-pick - *"What do you pay every month?"* — chip grid: Rent · Electricity · Gas · Internet · School fee · Mobile · Installment · + Custom - Tapping a chip expands inline: amount + day-of-month (2 fields only) - Each completed chip shows ⚡ "Auto-reminder on"

Step 4 — Done - Confetti-lite. Shows their **first Monthly Forecast** ("Your November: Rs 54,500 across 4 payments") → button: *"See my dashboard"* - Notification permission requested here, in context: *"Want reminders before due dates?"*

---

1. HOME — Dashboard

Layout (top → bottom):

Interactions: - Score ring animates on open (0 → value, 600ms) — the daily dopamine moment - Needs Attention capped at 3 items + "See all" → screen 1.2 - Pull-to-refresh recalculates score - Empty states: new user with nothing → friendly prompts ("Scan your first document 📸") not blank space

1.1 Life Score Detail

- Big ring + 7-day sparkline
- Component bars: Tasks 30% ▓▓▓

- Sections in order: **Overdue** (red header) → **Timed** (chronological with time labels) → **Payments** ⚡ (by due date) → **Anytime** (by priority)
- Task row anatomy: `○ checkbox · title · chips(⚡/domain/person) · time/due · 📎 if attachment`
- Swipe right = complete (haptic + satisfying check animation) · Swipe left = snooze menu (tonight / tomorrow / pick)
- Completing an ATC payment task → opens **M2 completion chain sheet** (see Modals)

2.3 Task Detail

- Title (inline edit), notes, due + reminder rows, priority selector, domain + person chips
- **Source line for ATC tasks:** "⚡ Created from: K-Electric bill scanned 12 Oct" → tappable → opens that document
- Attachments strip (thumbnails from Vault) + "Attach from Vault"
- Sub-tasks checklist
- Footer: Delete · Skip this cycle (ATC tasks) · Mute this rule (ATC tasks)

2.4 New Task (bottom sheet, not full screen)

- One smart text field: natural language ("pay internet Friday 5pm") with live parse preview chips underneath (🗓️ Fri 5:00 PM ✓)
- 🎤 mic button inside the field
- Expandable "More options" for the full form — default stays minimal

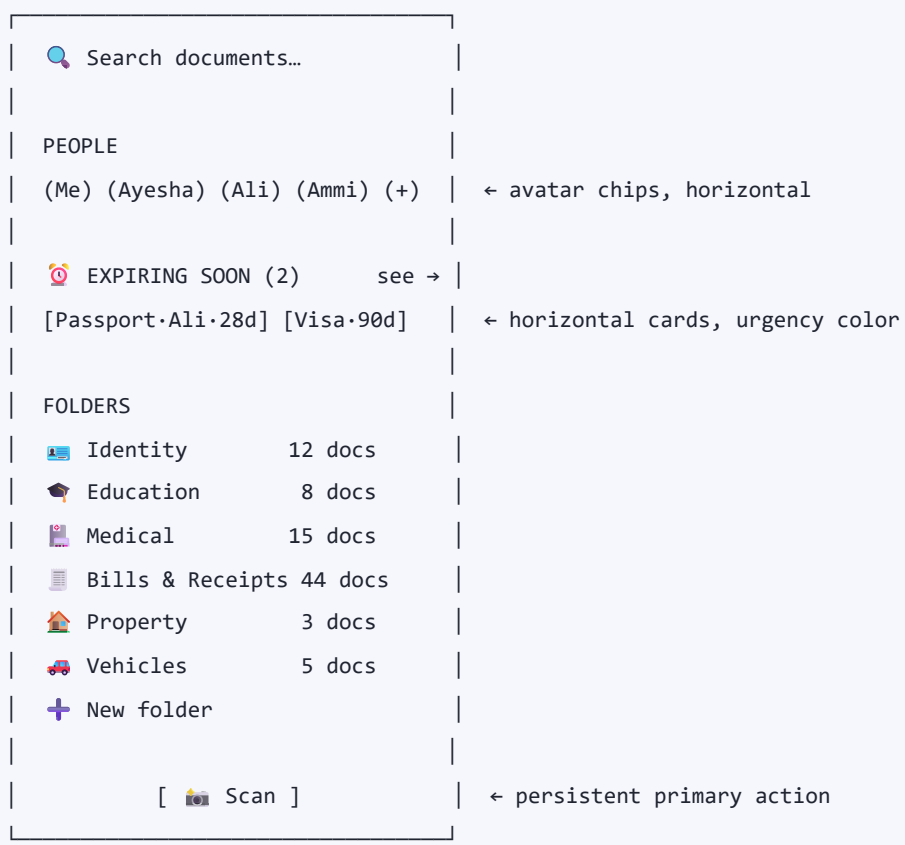

2.5 Overload Shield dialog

- Appears on save when day > 100% capacity:
- *"Monday is already full (6.5h of 6h)"* + mini bar chart of the week
- Buttons: **Move to Tuesday (suggested)** · Pick a day · Add anyway
- Suggested day = nearest day under 70% load

---

3. VAULT

3.1 Vault Home

- Vault may demand its own biometric unlock on entry (setting)
- Screenshots blocked inside Vault screens (if enabled)

3.3 Document Viewer

- Full-bleed document, pinch-zoom, page dots for multi-page
- Info panel (swipe up): type, person, extracted fields (editable), expiry with alert ladder shown, tags, "linked tasks" (the bill's payment task)
- Action bar: Share · Download PDF · Edit fields · Move · Archive · Delete (soft delete, 30-day trash)

3.4 Scan Flow (4 quick screens)

1. **Camera:** ghost frame, auto edge highlight, auto-capture when steady (toggle), batch counter top-right, flash/import buttons
2. **Crop/enhance:** draggable corners, mode chips (Original/Doc/Grayscale), "Add page" for multi-page
3. **Classify (the magic screen):** document preview with detected type chip + extracted fields sliding in as they're read — *"K-Electric Bill · Rs 4,850 · due 14 Nov"* — each field editable; person selector; folder auto-chosen with override
4. **Confirm:** single button *"Save to Vault"*; if a due date was found → inline toggle, pre-ON: " ⚡ *Create payment task for 14 Nov*"

Total target time: **under 15 seconds** scan-to-saved.

3.6 Expiring Soon

- Sorted by days remaining; urgency coloring (red ≤7d, amber ≤30d, grey beyond)
- Each row: renew flow button → "Mark renewed → scan new document" wizard (old doc auto-archived)

3.7 Share sheet

- Three options with trust labels:
- **Send file** (standard OS share)
- **Safe link** 🔒 — expiry picker (1h / 24h / 7d), optional PIN, watermark toggle → copies link; active links listed with revoke buttons
- **Bundle** — multi-select docs → merged "Application Pack.pdf"

---

4. MONEY

4.1 Month Overview

- Big number: spent this month + vs-last-month delta arrow
- Donut by category (fixed payments pre-colored)
- Recent expenses list (receipt thumbnail if linked)

4.2 Monthly Forecast

- Calendar strip with payment dots on due days
- List: each payment with amount, status chip (Upcoming / Paid ✓ / Overdue 🔴)
- Header: "Rs 61,500 total · Rs 23,000 paid · Rs 38,500 remaining"
- Salary-aware mode on → timeline starts at salary date, "41% of income goes to fixed payments" insight line

---

5. MORE

5.1 ATC Rules Manager

- List of rules grouped by type (Bills · Fees · Fixed · Appointments)
- Rule row: name, cadence ("~12th monthly"), last/next run, pause toggle
- Rule detail: edit fields, history ("created 6 tasks, 6 paid on time ✓"), mute/delete
- Header stat: " ⚡ *ATC created 14 tasks for you this month*" — makes the invisible value visible

5.6 Settings (grouped)

- **Security:** app lock, Vault lock, auto-lock timer, screenshot block
- **Backup & sync:** off / Wi-Fi / always, E2E badge, last backup time, restore
- **Notifications:** morning digest time, quiet hours, per-domain toggles

- **Language:** English / اردو (instant switch, no restart)
- **Data:** export all (ZIP/CSV/JSON), trash, delete account
- **Premium:** plan status, manage

---

3. Global Modals

M1 — ATC Proposal dialog

> ⚡ **New pattern detected** "Your electricity bill usually arrives the 10th–14th. Create a monthly reminder?" [Yes, remind me] [No thanks] - Max 1 proposal per day (anti-annoyance); others queue

M2 — Payment Completion Chain (bottom sheet, after checking off a payment)

```
✓ School fee — Rs 12,000 paid
  Attach receipt?   [📸 Scan] [🖼 Gallery] [Skip]
→ then: "Filed in Vault · Logged in Money · Score +2" (3 stacked
  micro-confirmations animate in — the one-tap-four-results moment)
```

M3 — Voice Capture overlay

- Full-screen mic with live waveform + live transcription (Urdu/English auto)
- Parse preview: *"Pay electricity bill → Friday"* chips → [Create ✓]

---

4. Notifications (as UI surfaces)

Notification	Actions (no app open needed)
🌞 Morning digest: "Score 78 · 5 tasks · 1 bill due"	tap → Home
💸 "Electricity due tomorrow — Rs 4,850"	[Paid ✓] [Snooze]
⏰ "Passport (Ali) expires in 30 days"	[Set renewal task] [Dismiss]
💊 "Metformin — 8:00 PM" (P1)	[Taken ✓] [Skip] [10 min]
⚡ ATC proposal	[Yes] [No]

Lock-screen privacy: generic titles when app lock is on ("A payment is due tomorrow").

---

5. Design System Notes

- **Type scale:** large readable defaults (16sp body) — audience includes parents/elders
- **Domain colors:** Mind indigo · Money green · Health red · People amber · Work blue · Soul teal · Vault slate — used as accents/chips only, never full-screen floods
- **Score colors:** <40 red, 40–69 amber, ≥70 green
- **Motion:** check-off tick, score ring fill, scan auto-crop snap — 3 signature animations max; everything else instant
- **Offline indicator:** subtle cloud-off icon in app bar; absolutely no blocking "no internet" walls
- **Accessibility:** full TalkBack/VoiceOver labels, 48dp touch targets, dynamic type support
- **Empty states:** every list has an illustrated empty state with one action button — never a blank screen

---

6. Core User Journeys (click-paths)

1. **Scan a bill → auto task:** FAB 📸 → camera → confirm classify → "Save to Vault" (⚡ toggle on) → done. *4 taps, ~15s.*
2. **Pay day:** notification [Paid ✓] → M2 sheet → scan receipt → auto-filed/logged. *3 taps.*
3. **Find document in crisis:** Vault → search "passport" → viewer → Share → Safe link 24h. *5 taps.*
4. **Monthly planning:** 1st of month digest → Forecast screen → review → done. *2 taps.*
5. **New fee cycle:** scan voucher → ATC proposes monthly rule → [Yes]. *3 taps, runs forever.*

End of UI/Screen Flow — pairs with `lifeos-features-spec.md` *§16 build order.*
